

Appendix P: T-Tests of Selected Survey Items by Citizenship Status, National Origin, and Military Service – Main Campus

In the following tables, a mean rating with a superscript indicates that this mean is a significantly higher numerical value (at the 95% level of confidence) than the mean in the column that is numbered corresponding to the superscript. In instances where a superscript is not present between a pair of groups, the difference between means is not statistically significant.

The data presented in these tables are weighted, with both the base weight and post-stratification weights applied. A complex sampling plan was applied during analysis to account for effects of weighting on variance and significance. For additional information on weighting in this study, see Appendix A, Survey Methodology.
